Lift it to a higher level...

... all the way to almost 11 meters, with media guaranteed to have you noticed in spots, blogs and photo reports. Waving flags are never overlooked. And we can rent you flagpoles including flags, with full servicing. Flagpoles are delivered and installed by us, flying flags we produce, and when your event ends we dismantle and take them away. Of course, you can retain your flags after the event ends.

**Why buy Swedish fiberglass flagpoles with a 10-year guarantee when you need them only for a couple of days?**

Concrete bases for the flagpoles can be laid on either a reinforced or paved surface. The place where the flagpoles will be set does not have to be directly accessible by heavy-duty equipment. These bases are deployed individually using a special transport trolley. The poles themselves are flexible and do not conduct electricity so they do not need to be grounded. They are anchored to the ground so installing them is simple even if they cannot be nicely aligned vertically. The absence of any control cable and clicking mechanism keeps the flags inaccessible to vandals.

Horizon Type Poles have a clamping arm so the flags are 100% readable in any weather. Flag size is optional with maximum area based on the load exerted on the mast. Flags are manufactured with full-color, steam-fixed technology and double-sided, two-way soaking on run-resistant full-polyester knit fabric for outdoor use.
